Dear Recruiter,

I'm writing to apply for the Summer Internship - Engineering position in FormFactor. I got to know this position on the University of Michigan's handshake.

Using the knowledge and skills I have acquired in my Computer Engineering and Computer Science degree, combined with my technical abilities, I believe I can provide significant value to FormFactor.

During the course work, I have fully practiced the VERILOG and C++/C skill. I leaded my group to design and implement a Two-way superscalar out-of-order processor in SYSTEM VERILOG. I also participate in designing A Novel Accelerator Design for Natural Language Processing CNNs. These two projects provides me a strong VERILOG skill. The Data structure courses and embedded control system courses provides me proficient C++/C skills.

Besides, my research experience ranges from FPGA programming and Control System Design to Machine Learning. I believe my rich work experience can provide FormFactor a great help.

Thanks again for your time and consideration. I look forward to hearing from you and providing more details about myself. My e-mail address is zwtao@umich.edu, phone number is (+1)7343539808.

Best Regards,

Wentao Zhang
